What ALI Certified Really Means

ALI (Automotive Lift Institute) governs the safety standards for automotive lifts in the U.S. ALI Certified lifts must all pass the exact same testing, material and operational standards. This testing covers the structural integrity, proper control function and even overloading the lift beyond its rated capacity. The procedures are PASS - FAIL. Either you get the sticker or you do not. Rotary, Forward, Mohawk and ATLAS Certified Lifts are all subject to the exact same production and testing standards.

If a product carries the ALI Gold Label you can be assured that the equipment and the manufacturing facility it is produced in are in compliance with the ALI Standard. The facilities are audited at least two times, yearly, to guarantee the process and product adhere to the ALI Guidelines.

IBC or International Building Code is in use in all 50 States. This Code states that for every region governed by IBC, automotive lifts must adhere to the ALI Standard in order to obtain permits for lift installation in new construction buildings.

PV-12P EXTRA WIDE
EXTRA TALL

The Atlas PV-12P and PV-15P are commercial grade lifts designed to accommodate heavy, long wheel base trucks. The low pad height on the PV-12P allows the operator to lift both cars and trucks. The larger arms and taller pad height on the PV-15P are designed for customers who primarily work on trucks and SUVs. The extra distance between the columns accommodates wider vehicles or vehicles with wide rear-view mirrors. The extra height is perfect for tall vans and box trucks.

Atlas 18K

Atlas18k

ALI Certified

The ALI CERTIFIED Atlas 18,000 lb capacity heavy duty two post lift meets the highest European and American Lift Institute standards. This electro-hydraulic lift features the finest design, engineering, and manufacturing that has made the Atlas brand a globally recognized stamp of quality. Includes safety lowering valve, mechanical safety latch, synchronization cables, and high quality steel to ensure a safe and powerful lift system. Arms, adapters, and carriages are usually the first components to show excessive signs of wear on a low quality lift. Atlas takes important steps to ensure that our components stay working correctly and safely for years to come.

SAVE BIG \$\$\$ When You Buy A 4-Post Lift And Add 2 Center Jacks

Atlas 409-HP Super Deluxe Storage Lift

The Atlas 409-HP is a commercial grade portable four post lift built for Mr. Homeowner. The 409-HP incorporates tall columns and a long hydraulic cylinder that allow the runways to be raised 76 inches (under runway) in the highest lock position. This extra lifting height allows most SUVs and pickup trucks to be parked underneath the vehicle stored on top and the extra runway width between the columns easily accommodates one ton dual wheel trucks.

The Atlas 409-HP is built to the same commercial standards as our Atlas 412 and Atlas 414 four post lifts, but also offers portability. (optional caster kit available) The Atlas 409-HP can be free standing and does not need to be bolted to the concrete.

2-Wheel Alignment Wheelbase	Maximum 157"
Shipping Weight	3,400 LB.

Atlas 414A ATPK-414A-KIT

The Atlas 414A uses a high strength cable system (with a under runway oversized hydraulic cylinder) powered by a 220 volt (single phase) power unit to raise and lower the lift. Many competitors use an "old style" chain lifting system with an exposed hydraulic cylinder system. Old style chain lifts are difficult to "level" properly and the exposed hydraulic cylinder is responsible for numerous "door dings".

Atlas 14KOF-EXT **Open Front Alignment Lift**

The Atlas 14KOF-EXT Garage Pro four post commercial grade open front alignment lift is built for years of dependable service for the busiest of automotive shops. This heavy duty alignment open front four post lift is two feet (24 inches) LONGER than our Atlas 14KOF open front four post alignment lift. We added two feet of runway length to accommodate those customers who have the "CAMERA TOWER ALIGNMENT SYSTEM" and are required to "rollback" long wheel base vehicles. The Atlas 14KOF-EXT alignment lift utilizes top quality aircraft cable actuated by an oversized hydraulic cylinder (located underneath the runway) to provide the smoothest and safest method of lifting both small cars and large trucks. You can trust the Atlas name for many years of dependable service.

Atlas Lawn Mower Adapter

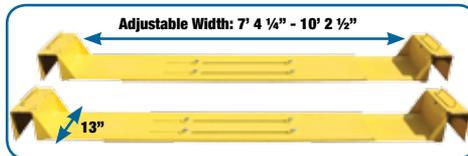

The ATLAS LMA (lawn mower adapter) will transform most two post above ground lifts with symmetric arms into an easy to use lawn mower lift, golf car lift, snowmobile lift, ATV lift, or a small sports car lift. The LMA is adjustable in width to accommodate the many different arm configurations found on two post lifts. The ATLAS LMA can be used in an infinite amount of wheel base configurations to allow the operator great flexibility in lifting different pieces of lawn service equipment with varying wheelbases.

Mobile Column Lift Systems

Don't waste valuable floor space with a large four post lift. Atlas Mobile Column Lift Systems will save shop space and money versus a four post lift. No need to buy an extended length 4-post lift. With Atlas mobile column lifts, longer wheel bases are not a problem. Adjustable forks accommodate a wide range of wheel sizes. All Atlas Mobile Column Lift Systems electronically ensure synchronization of all columns.

Atlas Edge 501

The Atlas Edge 501 is an ultra fast and accurate alignment system. The Atlas® 501 is the perfect choice for quick reliable "dead-nut" alignment "full body" accuracy for an entry level price. The 501 System utilizes eight cameras (these cameras "look at each other" from both sides of the rear of the vehicle) to provide accurate measurements between rear wheels just as the two front cameras provide measurements between the front wheels. The eight camera system completes a rectangle which produces a closed 360 degree measured field.

FEATURES

- Bluetooth® Wireless Data Transmission
- 8 Camera Optical System
- Standard Four Point Clamps Included
- Deluxe Cabinetry With Printer Drawer
- Lightweight (8 LB.) Sensor Heads
- Printer, LCD Monitor, Keyboard
- Lipless Wheel Adapters
- 2 Heavy Duty Turntables Included
- 1 Brake Pedal Depressor
- 1 Steering Wheel Lock
- Wireless App Compatible
- Vast Vehicle Database
- Simple 4 Key Operation
- Spoiler Program For Low Air Dams

Servicing or updating your Atlas Edge alignment machine is simple if you have internet access at your shop!

We can access your alignment computer to provide upgraded software, install new vehicle data and diagnose software or hardware issues. There is no need to wait for the "alignment service tech in the little white van". We stock parts and can ship quickly. If you can replace parts on a car, then you can replace any broken part on your Atlas Edge alignment machine.

- Only four color coded (arrow) buttons are required to operate the entire program.
- The system can be operated from any sensor head and the software is simple.
- Lightweight (8 lb.) sensor heads.

501 W/ Fast Clamp System

Clamping method prevents damage to expensive rims

The 3 point "Fast Clamp System" offers the finest wheel reference points in the industry. The operator does NOT need to perform any lateral runout compensation procedures or "roll-back" maneuvers when the sensors are mounted to the patented "Fast Clamp System". The technician does not need to disturb the vehicle's natural running position by rolling or raising it. A vehicle is most accurately aligned when it is in the "full rest" position.

SAVE BIG \$\$\$ When You Buy An Alignment Lift And An Alignment Machine Combo

Atlas Edge 601 Pro

The Atlas Edge 601 alignment system may be the most user friendly wheel alignment system available. The Atlas Edge 601 combines low price, simple to use technology, and repeatable accuracy in a machine that is "ready to use" out of the box.

FEATURES

- The system can be operated from any sensor head. Software is simple.
- The machine is "ready to go" out of the box.
- Bluetooth technology eliminates the need for any connecting cables
- Deluxe cabinetry
- Fast set up and unparalleled accuracy in an alignment system costing thousands of dollars less than the Big Name competition ensures a fast return on your investment.
- Non-proprietary computer hardware makes replacement or upgrades affordable.
- Printer, LCD monitor, and keyboard

Atlas Edge 701-3D With IC3D TowerFree™ Technology

IN STORE PICK-UP PRICE
\$16845
OR
\$16995
W/ SHIPPING INCLUDED

ATEDGE-701-3D

Thousands of 3-D camera TOWER machines have been sold in the last 20 years. Hunter® and John Bear® have done a wonderful job convincing customers that a 3-D camera TOWER system is much more accurate than a portable CCD alignment system. We disagree, but rather than argue with the thousands of satisfied 3-D camera tower alignment customers, we decided to build a 3-D camera alignment system that was 100% user friendly. Rather than just copying the status quo 3-D camera TOWER system, we asked dozens of current 3-D alignment owners what features "they would change" in their current 3-D camera TOWER system. If we were going to build a new product, we thought it best to "engineer out" as many of the "unwanted" features as possible and "engineer in" every possible feature that would make new 3-D camera system the absolute best.

- Compatible with virtually any alignment lift
- Valuable space saved in front of the lift
- Works flawlessly at any height
- Does not require an extra long lift

- Four post lifts cannot block the vision of the Atlas® Stealth 701
- The Atlas® Stealth 701 3-D can measure extra long vehicles

**CLAMP
UPGRADE KIT
AVAILABLE**
ATEDGE-4PFCU

Aligner Connect App ATEDGE-SDA141
For Alignment Machines

Built-In VIN Code Scanner **\$350**

Use your android or iOS device to not only see your alignment, but also control your alignment and perform the entire alignment all from your device. No need to make unnecessary trips back and forth to change screens and look at your alignment numbers when they can be right at your finger... on a device you already own.

Atlas Cyclops With IC3D TowerFree™ Technology

After almost 20 years, a revolutionary new 3-D system is now available. Introducing the Atlas® Cyclops 3-D TowerFree™ Camera alignment system featuring IC3D technology. The Atlas® 3-D camera system does not require a fixed tower and is easily installed on the alignment lift runways so the size of the bay space needed is determined by the length of the lift (or vehicle on the lift). No more loss of valuable bay space at the front of your alignment lift. The "alignment lift" may be a four post lift, a scissor lift, a parallelogram lift, or "the floor".

IN STORE PICK-UP PRICE
\$19995

FEATURES

- Compatible with any alignment lift
- Works flawlessly at any height
- Save valuable bay space
- Wireless communication eliminates the need to walk to the console
- Portable computer console
- Free InstaCheck system
- 3-Point Non-Runout FastClamps

The InstaCheck system provides accurate alignment measurements (on the floor) in less than 80 seconds. Simple to use and a great way to provide alignment information to potential alignment customers. Sell more alignments!

• Compensates for an unlevel lift

- The cameras work at any height
- Patented three (3) dimensional sensor targets eliminate the need for rollback

• 3-Point Non-Runout FastClamps

ATLAS WHEEL STAND/TURNTABLE COMBO

Color May Vary

Atlas Edge 801

COMBO-801+STDA29L

We have the most innovative large truck alignment system on the world market. It features Bluetooth wireless data transmission and is customized for all truck axle configurations – 2, 3, 4 and 5 axle configurations. This system combines blazing speed, precision accuracy, and reliable Bluetooth® wireless communication all at a very affordable cost. It is PC Driven using high quality PC components and managed by Windows XP Pro®. The system prints detailed alignment reports and stores these reports on its hard drive for future retrieval.

FEATURES

- Bluetooth wireless data transfer
- Software lets you choose between trucks, trailers, buses, coaches, light trucks and more.
- Allows you to choose between 2, 3, 4, or 5 axle vehicles
- Specifications for thousands of trucks, C, coaches, and light trucks are included in software.
- Measures collision angles such as axle set back and offset to help diagnose uncommon problems.
- Optional calibration package
- Kingpin fixture assembly and electronic focal points allow operator to quickly align trailer axles using the trailer kingpin as reference

- Only four color coded buttons operate the entire system.
- Program walks the operator thru the alignment process in a simple step by step manner.

- Non Runout Fast Clamps- Accurately references the center of the wheel
- Eliminates need for time consuming runout compensation of all 6 wheel positions of a 3 axle tractor

- TOTAL WHEEL ALIGNMENT- Performs a total alignment of the vehicle and looks at all axles as a whole and not just a single axle at a time.
- Alignments can be performed in a service bay or outside parking area

ATLAS PLATINUM

Building on the undoubted reputation for great product and service that has become synonymous with the Atlas brand, we are excited to introduce ATLAS PLATINUM, the next level of product specification and warranty, designed to meet the needs of those customers looking for a higher grade of equipment. The range commences with a line up of wheel service equipment, each model carefully tailored as a result of direct comparisons with some of the world's most popular models from leading, famous brands, but with a price-point that makes Atlas Platinum simply unbeatable for price / performance ratio. Additional product and an expansion of the range will follow, and you can expect to see Atlas Platinum firmly establish itself as a recognized name alongside the traditional 'mid to premium' equipment suppliers.

PWB50

AP-PWB50

The PWB50 is a feature packed, high volume passenger vehicle wheel balancer that guarantees speed, accuracy, and a long life by combining Italian engineering and components with the Factory Direct Value that ATLAS is known for around the World. Optimization of tire and wheel unbalance (match mounting) is possible with the PWB50 via OPTIMATCH software and makes balancing even the most difficult assemblies easy and efficient.

Pneumatic Portable Wheel Lift

The Atlas pneumatic portable wheel lift (AEZWL) is the perfect solution to prevent back injuries when lifting large wheel assemblies onto the shaft of a wheel balancer or on onto tire changer turntable. Today's wheels and tires are getting bigger and heavier. Many wheels are expensive and can be easily scratched or damaged. The Atlas wheel pneumatic wheel lift will lift a 180 pound wheel easily and allow the operator to maneuver the wheel into the correct position without fear of wheel damage or back strain. The AEZWL operates on 120 PSI air pressure.

Delivered-CFM 40PSI	12.0
Delivered-CFM 90PSI	10.5
Pressure Setting	90 lb. - 135 lb.

AF4

Single Stage 60 Gallon

This compressor utilizes a three cylinder single stage pump as compared to the two cylinder pump on the Atlas AF3. The Atlas AF4 also employs a slightly more efficient motor than the Atlas AF3. The Atlas AF4 produces "faster" air for the shop operator who cannot wait. The no-load recovery time (90 LB. to 135 LB.) for the Atlas AF4 is twice as fast as the Atlas AF3. (1 minute and 40 seconds.)

Motor Running	3.4 Horsepower
Delivered-CFM 40PSI	15.0
Delivered-CFM 90PSI	13.7
Pressure Setting	90 lb. - 135 lb.

AF5

Single Stage 60 Gallon

This compressor is equipped with an oversized three (3) cylinder cast iron single stage reciprocating pump that produces a large volume of air at a very competitive price. The Atlas AF5 is our lowest priced air compressor that is capable of delivering enough air to effectively run our SBC 420 sandblast cabinet (when used with #8 or #10 glass beads). The Atlas AF5 does not produce enough air to "run" the sandblast cabinet for an extended period of time, but does produce a sufficient volume and pressure to operate the machine for ten minute intervals.

ATAF5

AF6

Two Stage 80 Gallon

This is our entry level, two-stage air compressor. This unit operates between 140 LB. and 175 LB. PSI. The Atlas AF6 will run the SBC 420 sandblast cabinet (when used with #8 or #10 glass beads). The combination of the commercial grade low RPM motor and heavy duty 3 cylinder (2 cylinders are low pressure and one cylinder is high pressure) cast iron reciprocating air compressor pump delivers an incredible amount of air volume and air pressure for a very low price.

"Move-It" Dollies (Set of 4)

Our "Move-It" dolly system is the easy answer for moving cars in your garage. These dollies allow operators to lift the car in seconds with the built-in jacking mechanism – then just roll the car to the desired location. This unique system makes the need for a separate jack obsolete.

MOVING YOUR VEHICLE IS MUCH EASIER WITH A SET OF "MOVE-IT" DOLLIES!

HTSB28

HTMB275 Passenger and Light Truck

The HTMB275 tire spreader can be used with most wheel clamp tire changers. The metal mounting plate is held securely between the clamping jaws of the tire changer, allowing the operator to position the tire at the correct working height to make tire repair easy. The HTMB275 has adjustable spreader arms that fit on the inside beads of the tire and are spread open by use of the heavy metal arm. The 275 tire spreader is the perfect choice for those customers who need to perform inside tire repairs on most passenger and light truck tires. This tire spreader can be bolted to a workbench.

Specifications

Tire Width Capacity:	5 3/4" TO 10 3/4"
Overall Dimensions:	35" L x 12" W x 10 1/2" H
Shipping Weight:	25 Lb.

HTM275 Passenger and Light Truck

The HTM275 tire spreader is a heavy duty tire spreader designed for use in shops that repair passenger and light truck tires. The HTM275 has an adjustable four (4) position table that can be rotated for easy access to the inside of the tire. The foot pedal controls the position of the table top. Depressing the spring actuated foot pedal allows operator to move the table top to the most desired position. The tire is rotated easily on the heavy rollers mounted on the table top. The spreader arms are adjustable to accommodate passenger and light truck tires.

Specifications

Tire Width Capacity:	5 3/4" TO 10 3/4"
Tire Diameter Capacity:	11" TO 24"
Overall Dimensions:	30" L x 12" W x 39 3/4" H
Shipping Weight:	67 Lb.

FEATURES

- Portable
- Adjustable clamping arms
- 4 position table tilt
- Rotatable table design
- Makes tire inspections and repair quick & easy
- Adapts to varying sidewall heights and tire widths

HTS825 Large Truck

The HTS825 truck tire spreader makes it easy to lift and repair large truck tires. The powerful pneumatic lifting table can accommodate tires of up to 250 lbs. and raises them to the perfect inspection and working height. The adjustable clamping arms and rollers as well as the pneumatic lift table allow the operator to repair large and small truck tires (and passenger tires) easily. If you are a professional tire repair shop that handles all sizes of tires, then the HTS825 is the perfect choice for all your tire repair needs. The HTS825 tire spreader has an adjustable work light and a tool tray.

FEATURES

- Easy to use hand operated controls
- Adjustable clamping arms
- Pressure gauge & regulator assembly
- Tool Tray
- Adjustable light
- Air outlet for air tool connection

- Independently adjustable upper and lower hooks
- Shipping Weight: 100 LBS.

BRA7600

Freight Truck Shipping Information

Our larger products are shipped by a common freight carrier. You (the customer) will need to have the product delivered to place that a 53 foot semi trailer can easily access. You (the customer) will need to provide the correct equipment to unload your purchase. If you do not have a loading dock, then you will need a forklift, skid steer, or some similar type of material handling equipment to unload the product. We included representative pictures of some products packaged for freight shipment below.

IF YOU HAVE ANY FREIGHT QUESTIONS REGARDING YOUR PRODUCT, PLEASE GET THEM ASKED AND ANSWERED BEFORE WE SHIP!

For the majority of locations, we may be able to provide a semi truck with a lift gate. The lift gate will assist the customer in unloading products such as motorcycle lifts, tire changers, wheel balancers, air compressors, sandblast cabinets, etc. Unloading two post or four post lifts (and other products weighing over 1000 pounds) will require a forklift (or some type of material handling equipment), if the customer does not have a truck-height loading dock. Remember, the customer is always responsible for providing the necessary equipment to offload their product safely.

If a product is picked up at a local trucking terminal, the truck terminal staff should be able to load the equipment on your trailer or truck. (You must furnish a vehicle that is large enough to "handle" your product). If you need to locate a terminal in your area, or if you would like a shipping quote, please contact our office.
